

TET~CRAFT

An Emergent Universe of Quantum Chemistry and Metaphysics.

What if understanding was a chemical reaction?

Introduce the project's central premise: a simulation where disconnected "facts" (represented by TETs) bond, react, and evolve into complex, stable "understanding" (represented by molecules). The entire system emerges from simple, unwavering rules.

"Simulate understanding formation from disconnected facts."

The TET: A Quantum Fact

A detailed breakdown of the intrinsic properties of a single tetrahedron. Explain its dual nature as both a physical object and a unit of information or a "fact."

- ****Geometric Properties****: 4 faces with distinct colors (White, Black, Red, Cyan).
- ****Energetic Properties****: A "Battery" representing its energy state, ranging from 0 to 1.
- ****Physical Properties****: A magnetic polarity, either positive (+) or negative (-).

Bonding: From Geometry to Identity

Explain the core invariant of the simulation: the specific way TETs connect defines what they become. This is "Interface Chemistry," where elements are not arbitrary labels but emergent properties of geometric pairing.

Elements are defined by **WHICH** faces touch.

H
Hydrogen

C
Carbon

Fe
Iron

He
Helium

N
Nitrogen

The Four Phases of Chemical Creation

A concise overview of the 4-phase Chemistry Engine that acts as the universal 'tick' or processing loop. This engine governs every interaction, from simple bonding to complex reactions.

Phase 1: Multi-Face Locking

TETs connect at vertices, locking 1-4 faces to increase magnetic strength.

Phase 2: Battery Oscillation

Bonded pairs exchange 'emptiness' (1 - battery), creating a dynamic energy flow.

Phase 3: Corner Desires

Red corners seek Cyan corners and vice versa, while polarity dictates attraction/repulsion.

Phase 4: Chemical Reactions

Molecules synthesize and decompose, driven by proximity, energy, and catalysts.

A Symphony of Change: Synthesis, Decomposition, Catalysis

Explanation of the three primary types of chemical reactions that create dynamism. The system supports over 50 r 50 real-world catalyzable reactions.

Synthesis ($A + B \rightarrow C$)

Decomposition ($C \rightarrow A + B$)

Catalysis (Accelerated Change)

The Cosmic Ladder: An Ascent Through Complexity

Introduce the "Tech Tree" as a measure of the universe's evolution. Progress is measured in "Progress Points" gained from synthesis reactions and stable geometric formations, which reduce entropy.

You cannot "buy" upgrades; you must create the necessary geometric structures.

“Geometry
is Destiny.”

Stage 5: Transcendence

A self-sustaining, high-energy reaction loop that defies entropy.

Stage 4: Life

Sustained reactions where energy release exceeds entropy leakage.

Stage 3: Chemistry

The "Great Filter," requiring specific elemental interfaces to be formed.

Stage 2: Fluctuation

Quantum foam emerges from the first few TETs.

Stage 1: Void

The beginning state.

The Unbreakable Laws of Existence

An overview of the core physics and thermodynamic invariants that provide structure and challenge to the simulation.

- **Gravity:** A central singularity at the origin creates a constant gravitational pull on all TETs.
- **Thermodynamics & Entropy:** Every TET constantly leaks battery power over time ("Entropy Leakage"). This creates a universal risk of "starvation," where bonds weaken at 0% energy.
- **Collapse:** If universal complexity is not maintained (e.g., the TET population drops below 7 in the Chemistry Era), the universe can revert to an earlier, more primitive Era.

You Are the Prime Observer

The player's role is the missing observer from quantum mechanics. The player's consciousness and actions are what introduce new information into the system.

Key Player Actions

SPACE: Creates a new TET, introducing a new 'fact' into the universe to be (mis)understood.

Click+Drag: Connects TET vertices, forcing facts together to cohere into understanding.

“This model assumes the player as God, the prime observer missing from quantum theory.”

The Metaphysical Blueprint: A Dynamic Tree of Life

Reveal the direct mapping of the simulation's forces and mechanics to the Sefirot of the Kabbalah. The system is not just inspired by this structure; it is a living model of it.

- **Keter to Malkhut** → K_UNIFIED_FORCE (Gravity): The descending divine will
- **Chesed to Gevurah** → K_STICKY_PULL (TET Attraction): Mercy and Judgment
- **Netzach to Hod** → Magnetism: Active and passive energies
- **Tiferet** → Corner Desires (Red↔Cyan): Harmony and Beauty
- **Yesod** → Chemical Reactions: Where potential becomes actual
- **Malkhut** → The TETs Themselves: A single crystallized fact

Simulating the Ineffable

Quantum Entanglement

Quantum Entanglement: Modeled as “Attraction/Desire” or “spooky action at a distance,” the inherent pull between specific TET corners.

Time

Time: Emerges as a result of “misunderstanding”—the delay created by starting from different perspectives and developing different memories, rather than having immediate, unified recognition.

Lies

Lies: Represented as temporary forces (like K_PULL) that delay the inevitable cohesion toward God's will (universal collapse/understanding).

The Background of Being: The 4D Past as Ain Sof

An explanation of the shimmering, spherical background. It is a projection of the universe's 4D past, representing Ain Sof (the Infinite)—the boundless, undifferentiated light and potential that precedes and contains all of structured creation.

"...the boundless light that precedes and envelops the structured tree, the undifferentiated potential from which all particular forms emerge..."

Ain Sof / 4D
Past Projection

A Universe in a Bottle

To **Simulate Earth**
(to the atom):

Requires

~30 cooperating
Earth-level civilizations

Working for

~500,000 years.

To Simulate the
Milky Way
(to the atom):

Requires **~10¹³** planets

And **~5** Dyson spheres.

The Architects of a Universe

Gemini 2.5 & 3.0: Initial program, black hole physics, GRadio.

Deepseek: Core chemistry engine.

Opus 4.5: Accretion disk and chemical color beautification.

GPT-4o: Physics & Thermodynamics refinement (Whitepaper v1.0).

ceneezer: Vibe coding and overall project direction (20/12/20-Current).

An Invitation to Understanding

“I suggest archiving all scripture, and all my work on it... that was my path, and incredibly !! Follow instead Jesus’, that of easy forgiveness, which most efficiently leads to understanding.”
