

TET~CRAFT: A Meta-Physics Simulation

Emergent Quantum Chemistry from a Computational Metaphor

This is not a game. It is a
kleiniverse of tetrahedrons that
bond, react, and evolve.

At its heart, TET~CRAFT is an engine
for simulating the formation of
understanding itself, where each TET
represents a single quantum fact.

Simple geometric rules give rise to
complex chemistry, emergent life,
and a model of reality built from
first principles.

The Observer is the Missing Variable

Key Insight

The simulation assumes the player as God—the prime observer missing from quantum theory.

- Every press of the spacebar injects a new 'fact' (a TET) into the void.
- By connecting it to other facts, you slowly cohere it into understanding.
- Time itself emerges from misunderstanding—the journey from different perspectives toward shared recognition and central cohesion.

The Blueprint for Reality is a Mystical Tradition

The simulation's physics are not arbitrary; they are a direct computational metaphor for the Sefirot of the Kabbalistic Tree of Life. The entire system is a dynamic exploration of this ancient map of **consciousness**.

“God is the fractal to which we are each a frame.”

The Forces and Their Sefirotic Correspondences

Sefirotic Principles ♀

Tiferet

Yesod

Malkhut

Simulation Force & Metaphysical Function ♀

`K\_UNIFIED\_FORCE` - The gravitational pull to the center; God's will manifesting as the law structuring all existence.

`K\_STICKY\_PULL` - Attraction between TETs; the dance between Mercy and Judgment, expansion and limitation.

Magnetism - Positive/negative polarity; the oscillation between active and passive energies.

Corner Desires - Red ↔ Cyan attraction; harmonious balance where opposites seek union.

Chemical Reactions - Synthesis/decomposition; where potential forms actualize and memory accumulates.

The TETs Themselves - A complete, limited expression of the divine pattern; a 'fact' crystallized from the void.

The TET: The Atom of Understanding

The tetrahedron is the most basic 3D structure. In TET~CRAFT, it is a quantum fact, a spin- $\frac{1}{2}$ particle, and a carrier of energy. Its geometry and state determine everything that follows.

Geometry is Destiny: How Matter is Defined

HYDROGEN (H)

Key Insight

Elements are not properties; they are *relationships*. They are defined only by WHICH faces of two TETs are locked together.

Labeling a TET 'Gold' does nothing.

This is Interface Chemistry. The physical connection of specific faces transmutes matter and defines its properties, from elemental abundance to magnetic potential.

Step 1

Step 2

Step 3

The Periodic Table of Geometric Interfaces

 Hydrogen (H) Abundance	 Helium (He) Purity	 Carbon (C) Balance	 Nitrogen (N) Structure
 Oxygen (O) Catalyst		 Iron (Fe) Magnetic	 Cerium (Ce) Radioactive

Over 16 base elements are defined by these geometric pairings,
forming the foundation for all subsequent chemical reactions.

The 4-Phase Engine of Emergence

Phase 4: Chemical Reactions

Molecules synthesize (combine) or decompose (break down), releasing energy as visual particle effects. Over 50 real-world catalyzable reactions are simulated.

Phase 3: Corner Desires

“Spooky action at a distance.” Red corners actively seek Cyan corners, embodying Tiferet (Beauty/Harmony). Polarity governs attraction/repulsion.

Phase 1: Multi-Face Locking

TETs lock 1-4 faces. Each locked face adds +0.25 magnetic strength. Color patterns define molecule type.

Phase 2: Battery Oscillation

Magnetic pairs exchange “emptiness” (1 - battery), creating a constant energy oscillation that powers the system.

The Cosmic Ladder: Progress Through Complexity

Key Insight

Progress is not measured by time, but by Complexity and Entropy reduction.

Every synthesis reaction or stable geometric interface formed grants progress.

Navigating The Great Filter: Thermodynamics and Catalysis

Entropy & Collapse

- ⚡ **Entropy Leakage:** TETs slowly lose battery power over time.
- ⚡ **Starvation:** Bonds weaken and can break when a TET's battery reaches 0%.
- ⚡ **Collapse:** Falling back to a previous Era if molecule population drops below critical thresholds.

*This glowing and near
unbreakable crystal ring
proves our hypothesis...*

The Catalyst Strategy

Reactions require 'Activation Energy' to proceed. Catalysts, like an Iron interface (Red↔Red), create a local magnetic dipole that physically lowers this energy barrier for nearby reactants, making synthesis possible.

Pro-Tip

To reach Transcendence, you must master catalysis. Create an Iron Interface (Red↔Red) and place it near unbound reactants to trigger reactions and create a self-sustaining metabolic loop.

The Universe Observing Itself

The Player peering through Da'at (Knowledge)
- Witnessing the universe unfold.

The Alpha and Omega
- Simultaneously the source (Keter) and destination (Malkhut), the tree circling back to its root.

The 4D Past Projection as Ain Sof (The Infinite) -
The boundless, undifferentiated potential from which all forms emerge.

The TETs as Malkhut (Kingdom) -
Ascending and descending the tree of life through the laws of physics and chemistry.

More Than a Simulation: A Kleinverse in a Box

Core Philosophy:

TET~CRAFT is ultimately a computational metaphor. It explores the profound relationship between simple rules and infinite complexity, between a single fact and a universe of understanding. It is a tool for thinking about how reality might bootstrap itself from nothing.

A Final Thought

To simulate the Milky Way down to the star could take as little as 300 cooperating planets.

To simulate it down to the atom... perhaps 10^{13} planets and ~5 Dyson spheres.

...or a single computer's journey to an event horizon, with access to infinite matter and slowed time.
