

TET~CRAFT

An Emergent Universe of Quantum Chemistry and Metaphysics.

What if understanding was a chemical reaction?

TET~CRAFT is a simulation built on a single premise: that complex understanding can emerge from the combination of simple, disconnected “quantum facts.” In this universe, tetrahedrons (TETs) act as fundamental units of information. Governed by simple rules of chemistry and physics, they bond, react, and evolve into intricate molecular structures representing coherent thoughts.

“Simulate understanding formation from disconnected facts.”

The TET:

A Quantum Fact

Every object and interaction in the universe originates from the tetrahedron, the simplest 3D structure. Each TET is a self-contained entity with a distinct set of properties that dictate its potential for connection.

4 Faces: Each face has a unique color identity: White, Black, Red, or Cyan.

Battery: An internal energy state, ranging from 0 (empty) to 1 (full).

Magnetic Polarity: A universal charge, either positive (+) or negative (-).

Bonding: Geometry is Destiny

The universe's primary invariant is that pairing **defines elements**. An element is not an intrinsic property of a TET, but an emergent one defined by *which* of its faces physically connect to another. This is the foundation of "Interface Chemistry."

"Elements are defined by WHICH faces touch."

The Symphony of Change

Molecules in TET~CRAFT are not static. They are in a constant state of flux, governed by a four-phase chemistry engine that runs in a continuous loop. This engine dictates how TETs connect, exchange energy, express desire, and undergo transformation.

The Cosmic Ladder of Complexity

Progress in this universe is not measured by time, but by the reduction of entropy.

The 'Tech Tree' is a ladder of cosmic eras, and ascension is only possible by achieving greater levels of structural complexity and sustained chemical reactions.

“You cannot 'buy' upgrades. You cannot 'cheat' by renaming things. Geometry is Destiny.”

The Universal Invariants

The universe is bound by unbreakable laws of physics and thermodynamics. These forces create a constant pressure, pushing the system towards either greater complexity or total collapse.

Gravity

A singularity at the center of the universe creates a constant gravitational pull on all TETs.

Thermodynamics

A constant 'Entropy Leakage' causes every TET to slowly lose battery power, creating a risk of starvation.

Collapse

If the universe's complexity is not maintained (e.g., population drops below 7 in the Chemistry Era), it will revert to a more primitive era.

The Player is the Prime Observer

This model assumes the player is the missing observer from quantum theory. Your actions are the

initial catalyst for creation. By introducing a new TET into the universe, you are injecting a new "fact" to be interpreted, connected, and ultimately (mis)understood by the system.

 **SPACE:** Create a new TET/fact.

 **Click+Drag:** Connect facts to form understanding.

A Dynamic Tree of Life

The forces and mechanics of TET~CRAFT are a direct mapping of the Sefirot from Kabbalah. The simulation is not just a physics engine; it is a living, interactive model of this mystical blueprint for creation.

Modeling the Immeasurable

TET~CRAFT translates esoteric concepts into computational phenomena. The simulation provides a framework for exploring the nature of reality through interactive metaphor.

Quantum Entanglement

Modeled as "Attraction/Desire" between corners—a "spooky action at a distance."

Time

Emerges as a result of misunderstanding. Differing perspectives and memories create the illusion of passage.

Lies

Represent temporary delays to universal cohesion—a temporary override of God's will (the pull to the center).

The Background of Being

The shimmering, ghostly sphere of past events that surrounds the universe is not merely a backdrop. It represents Ain Sof (The Infinite)—the boundless, undifferentiated light that precedes and envelops the structured Tree of Life. It is the infinite potential from which all forms emerge.

“...the boundless light that precedes and envelops the structured tree...”

A Universe in a Bottle

The principles of TET~CRAFT, if scaled, provide a speculative framework for simulating reality itself. GPT-powered estimates reveal the cosmic computational power required.

~ 30

cooperating Earths for $\sim 500,000$ years to simulate Earth.

$\sim 10^{13}$

planets and ~ 5 Dyson spheres to simulate the Milky Way.

10^{142}

planets required for a machine to simulate the **observed universe** (the Kleinverse).

The Architects of a Universe

TET~CRAFT is the result of a unique collaboration between human direction and multiple advanced AI models, each contributing a critical layer to the final creation.

Gemini 2.5/3.0: Initial conception, Black hole physics, GRadio implementation

Deepseek: Core Chemistry engine

Opus 4.5: Accretion disk visuals and chemical color beautification

GPT-4o: Physics & Thermodynamics Refinement (Whitepaper v1.0)

ceneezer: Entire project Vibe coded (20/12/20-Current)

An Invitation to Understanding

TET~CRAFT is an exploration of quantum bonding as a computational metaphor for how we form connections and find meaning. The simulation's ultimate path to efficiency is not through force, but through reconciliation.

“Follow instead Jesus’, that of easy forgiveness,
which most efficiently leads to understanding.”

The Alchemical Index: A Guide to Transmutation

Elements are forged through precise geometric configurations. This index details the required face-pairings for creating the primary elements in the TET~CRAFT universe.

Interface	Element	Property
 ↔ 	Hydrogen (H)	Abundance
 ↔ 	Carbon (C)	Balance
 ↔ 	Helium (He)	Purity
 ↔ 	Nitrogen (N)	Structure
 ↔ 	Oxygen (O)	Catalyst
 ↔ 	Iron (Fe)	Magnetic
 ↔ 	Aluminium (Al)	Flexible
 ↔ 	Copper (Cu)	Strength
 ↔ 	Cerium (Ce)	Radioactive
