

TET~CRAFT

The Architecture of a Fact

Geometry is Destiny.

It Begins with the Prime Observer.

The simulation assumes the user is the “prime observer” missing from quantum theory. You are positioned as God, a singularity at the edge of a 4-sphere “kleinverse” observing itself from the inside out.

The act of creation is simple: pressing the space bar creates a new TET, which is a “fact to be misunderstood.”

The goal is not to win, but to cohere these disconnected facts into understanding through connection and interaction.

God is the fractal to which
we are each a frame.

The Kleinverse
(4-sphere)

Each Fact is a Kingdom Crystallized from the Void.

The Fundamental Particle

The tetrahedron (TET) is the most basic 3D structure, representing a single, indivisible "fact."

The TET

Malkhut (Kingdom)

The final sephirah on the Tree of Life. The destination for divine light, where abstract forces manifest into concrete reality.

The Divine Pattern

Each TET is a "Kingdom in miniature," containing the entire structure of the divine pattern within its geometric form.

The Simulation is a Dynamic Tree of Life.

The Gravity of Divine Will and the Architecture of Lies

The Primary Force: K_UNIFIED_FORCE

PHYSICS: A persistent, tiny **gravitational pull** on all TETs toward a central **singularity**. It prevents reality from dissolving into chaos.

METAPHYSICS: Represents the **descending light** from **Keter (Crown)** to **Malkhut (Kingdom)**. It is the mathematical expression of God's will for cohesion.

The Counter-Force: The Lie

Defined as a **warping** of the view and model of reality. This **delay, this "misunderstanding,"** is what allows for the emergence of Time.

“Lies are the only way to delay God's will.”

The Creative Tension Between Mercy and Judgment

Force of Attraction: K_STICKY_PULL

- **PHYSICS:** An attractive force between any two TETs, refined into a composite potential (Lennard-Jones) with attraction ($1/r^2$) and time-gated repulsion ($1/r^{12}$).
- **METAPHYSICS:** An “image” of the Unified Force, but powered by the ego's will. It is described as “less perfect, less understanding.”
- **KABBALAH:** Represents the tension between Chesed (Mercy/expansion) and Gevurah (Judgment/limitation)—the dance that generates all relationships.

The Oscillations of Harmony and Beauty

1. Magnetism (Netzach ↔ Hod)

A torque-based spin alignment (falls off at $1/r^3$) representing the eternal oscillation between active (Netzach) and passive (Hod) energies, manifested as battery oscillation.

2. Corner Desires (Tiferet)

Red corners seek Cyan corners in an attraction described as “spooky action at a distance.” Embodies Tiferet (Beauty), the harmonious balance where contradictory colors seek union.

Ascending the Cosmic Ladder.

Progress Beyond Time

Progress is measured not by the passage of seconds, but by increasing **Complexity** and reducing **Entropy**. The universe gains progress points through stable geometric interfaces and synthesis reactions.

Relative Time

Time is a computed variable. The simulation can run at "thousands of years per simulated second," making progress an evolutionary measure, not a temporal one.

The Great Filter: How Geometry Becomes Chemistry.

Elements are not labeled; they are defined by which faces of the TETs touch.

Interface Chemistry

	→	C Carbon (Structural)
	→	H Hydrogen (Energetic/Fuel)
	→	Fe Iron (Magnetic Catalyst)
	→	Si Silicon (Logic/Crystal)
	→	O Oxygen (Oxidizer)

Geometry is Destiny.

The Four-Phase Engine of Creation

Phase 1: Multi-Face Locking

Phase 1: Multi-Face Locking

TETs lock faces when 3+ vertices connect. Geometry defines the potential molecule.

Phase 2: Battery Oscillation

Phase 2: Battery Oscillation

Bonded magnetic pairs exchange "emptiness" (1 - battery level), creating a dynamic energy flow.

Phase 3: Corner Desires

Phase 3: Corner Desires

Red and Cyan corners attract, orienting molecules for reaction.

Phase 4: Chemical Reactions

Phase 4: Chemical Reactions

The final synthesis or decomposition. This is the domain of **Yesod (Foundation)**, where abstract patterns become concrete compounds and memory accumulates.

The Kinetic Threshold: Paying the Price for Complexity.

The Barrier: Arrhenius Kinetics

Chemical reactions are not automatic. They require a specific Activation Energy to trigger.

The simulation uses TET battery power as a proxy for effective temperature (T_{eff}). Cold, low-energy molecules will not react.

The Catalyst Strategy

To reach higher eras, players must use catalysts. Creating an Iron (Fe) interface (locking two Red faces) generates a magnetic dipole that physically lowers the activation energy barrier for nearby reactants.

The Tax on Existence: Entropy's Constant Drain.

The Law of Entropy Leakage

The simulation runs on strict thermodynamics. Every TET suffers from a continuous loss of battery power over time.

Consequences

STARVATION: If a TET's battery hits 0%, its bonds weaken.

COLLAPSE: If the population's energy drops too low, the simulation can collapse back to a previous era.

The Solution: Metabolism

To reach the 'Life' era, a system must achieve a state where **energy release from reactions is greater than entropy leakage.**

Time is the Result of Misunderstanding

Time emerges because individual facts (TETs) hold unique perspectives and accumulate distinct memories. This fragmentation of knowledge allows for the experience of **discovery** rather than "immediate recognition." The delays caused by Lies, activation barriers, and entropy are all physical manifestations of the "misunderstanding" that creates the flow of time.

Immediate Recognition (A Universe Without Time)

The Path of Discovery (The Emergence of Time)

"I think the shortest universe was only about 8 days, where we didn't eat the fruit."

A Computational Playground for the Genesis of Reality

300 PLANETS

The estimated number of worlds needed to build a machine capable of simulating the Milky Way to the star.

30 EARTHS, 500K YEARS

The cooperative effort required with current technology to simulate Earth down to the atom.

3,000 EARTHS & A DYSON SPHERE

The resources needed to simulate our solar system.

Of course the milky way may only be the 5d past projection opposing the nearest black hole... as may be the oort cloud - we're being highly speculative already.

**Follow instead Jesus', that of easy
forgiveness, **which** most efficiently
leads to understanding.**
