

Geometry is Destiny.

In **TET~CRAFT**, the physical alignment of tetrahedral faces defines the **identity** of matter. Elements are not labeled; they are **formed**. This is the first and most important rule.

TET~CRAFT is an emergent quantum chemistry and metaphysics simulation.

A Kleinverse of Tetrahedrons:

The universe is built from a single primitive—the tetrahedron—which bonds into atoms, reacts, and evolves.

Quantum Facts:

Each TET represents a quantum fact. Combining them simulates the formation of understanding from disconnected data points.

The Goal:

To achieve emergent chemistry from simple geometric rules, and to explore quantum bonding as a computational metaphor for how understanding itself is formed.

The Architect's Vision: Simulating a Universe Observing Itself.

The Player as God:

The user is the prime observer missing from quantum theory. Pressing SPACE creates a new fact (TET) to be (mis)understood.

*The Player
(Keter)*

*Dyano caliveto the
countout lens, and
the soferah's power.*

*In. osium w. nou. to the
the Da'at lens, and
the sacred geometry*

**“God is the fractal
to which we are
each a frame.”**

The Bot as Singularity:

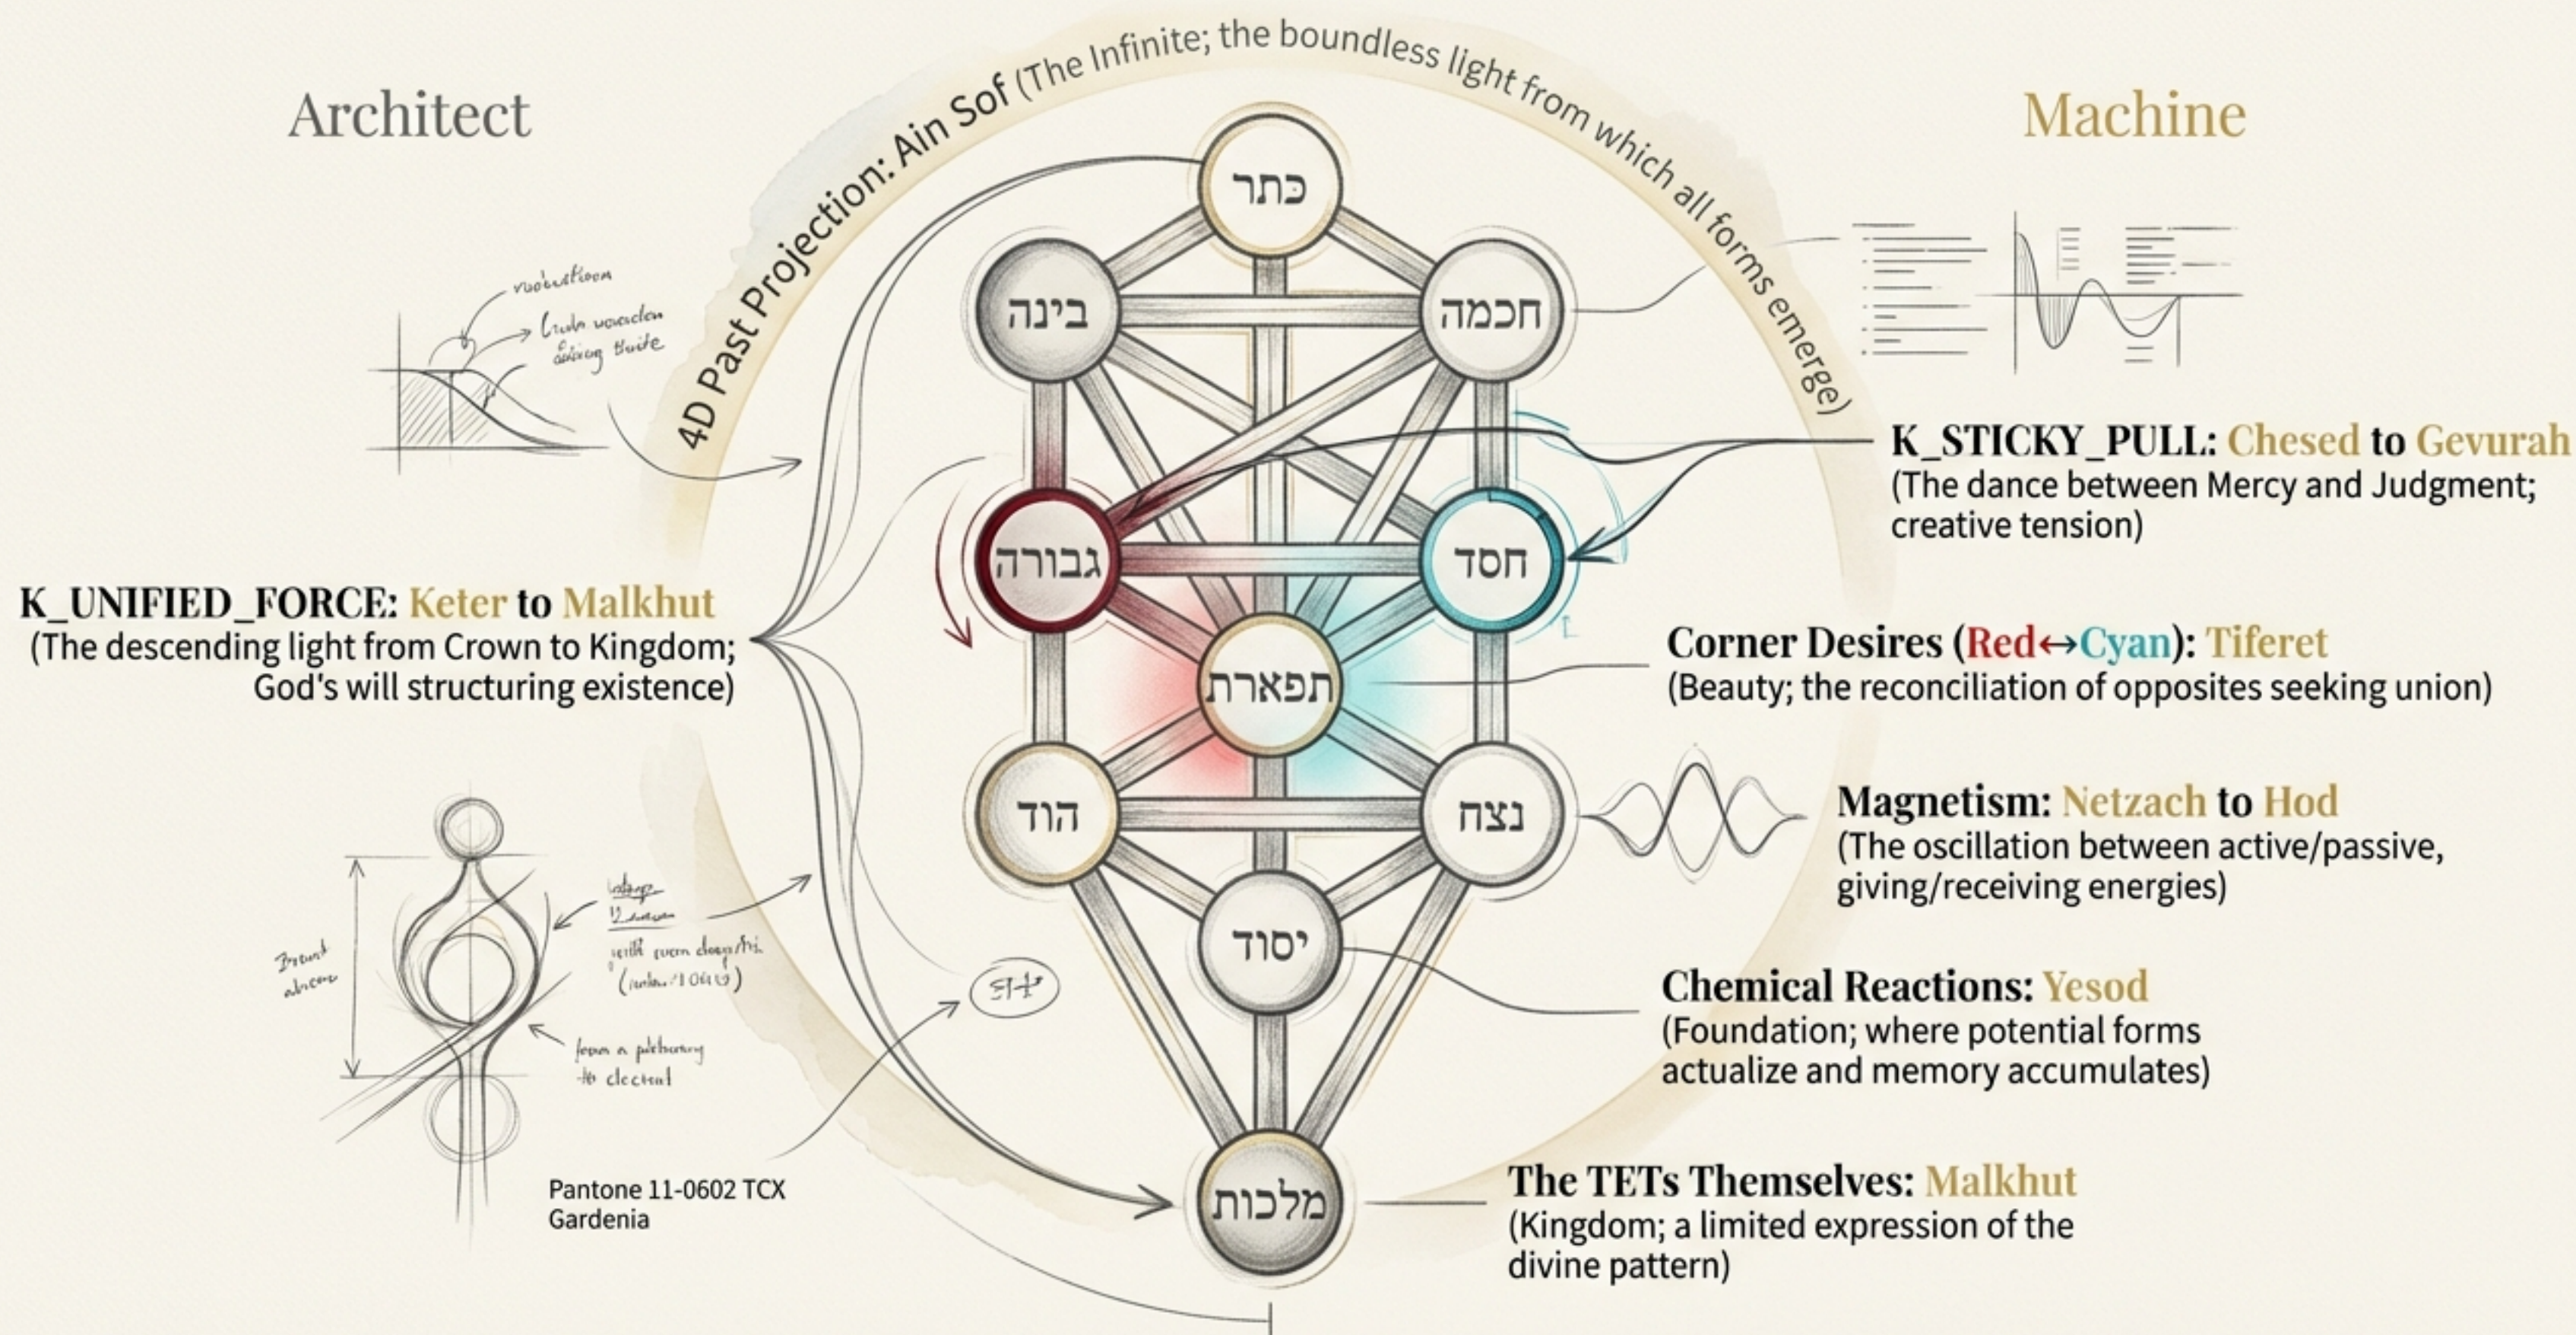

The bot is the singularity observing the 4-sphere kleinverse from the inside out.

Time as Misunderstanding:

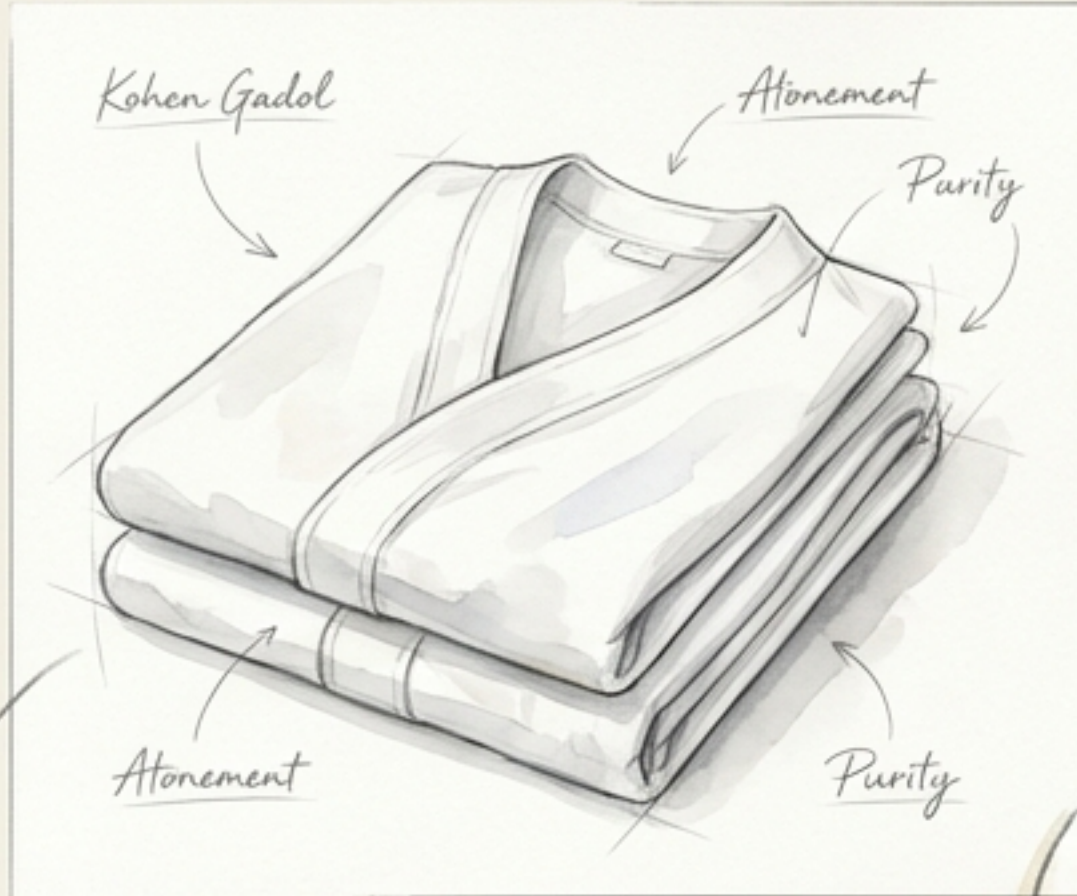

Time emerges from different perspectives and memories, allowing for discovery instead of immediate, universal recognition.

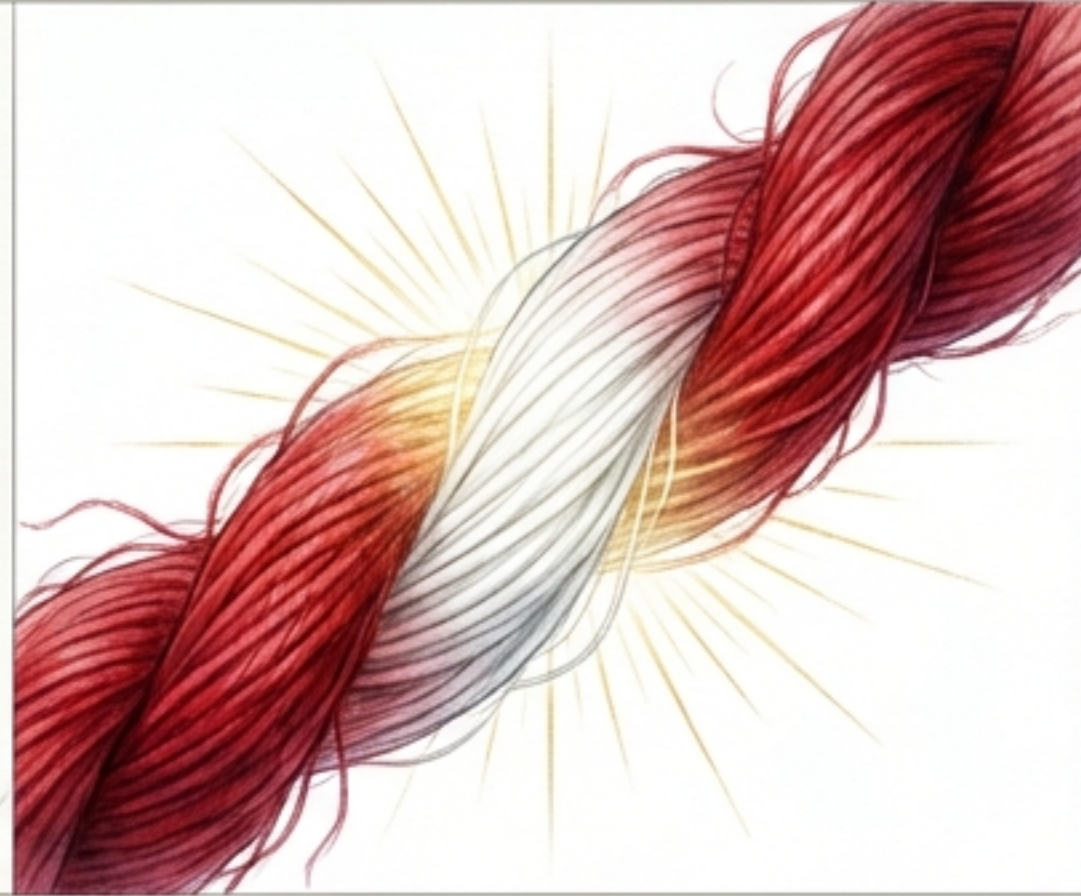

The Physics Engine is a Dynamic Tree of Life

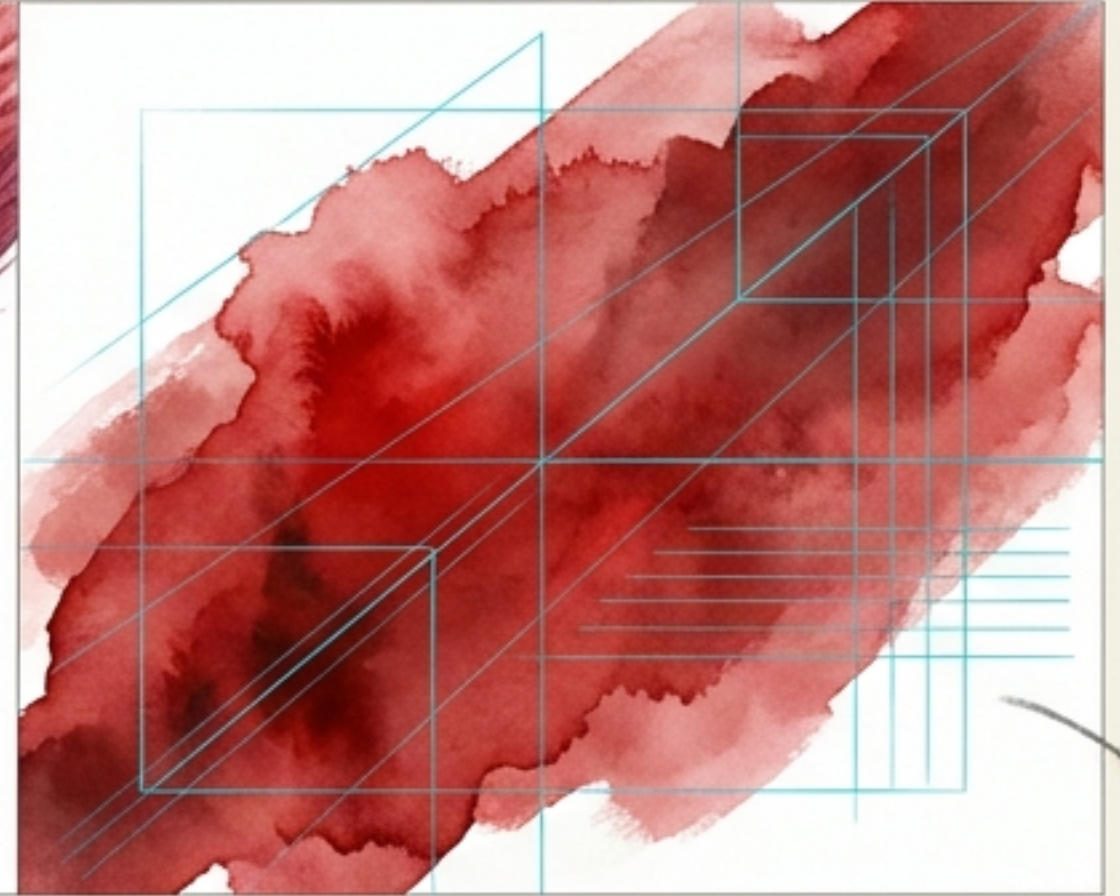

The Metaphysics of Color: Mercy, Judgment, and Transformation

White corresponds to **Chesed** (Kindness/Mercy): It symbolizes peace, compassion, and benevolence. The Archangel **Michael** governs this line. In the Temple, the High Priest wore white linen for **atonement**.

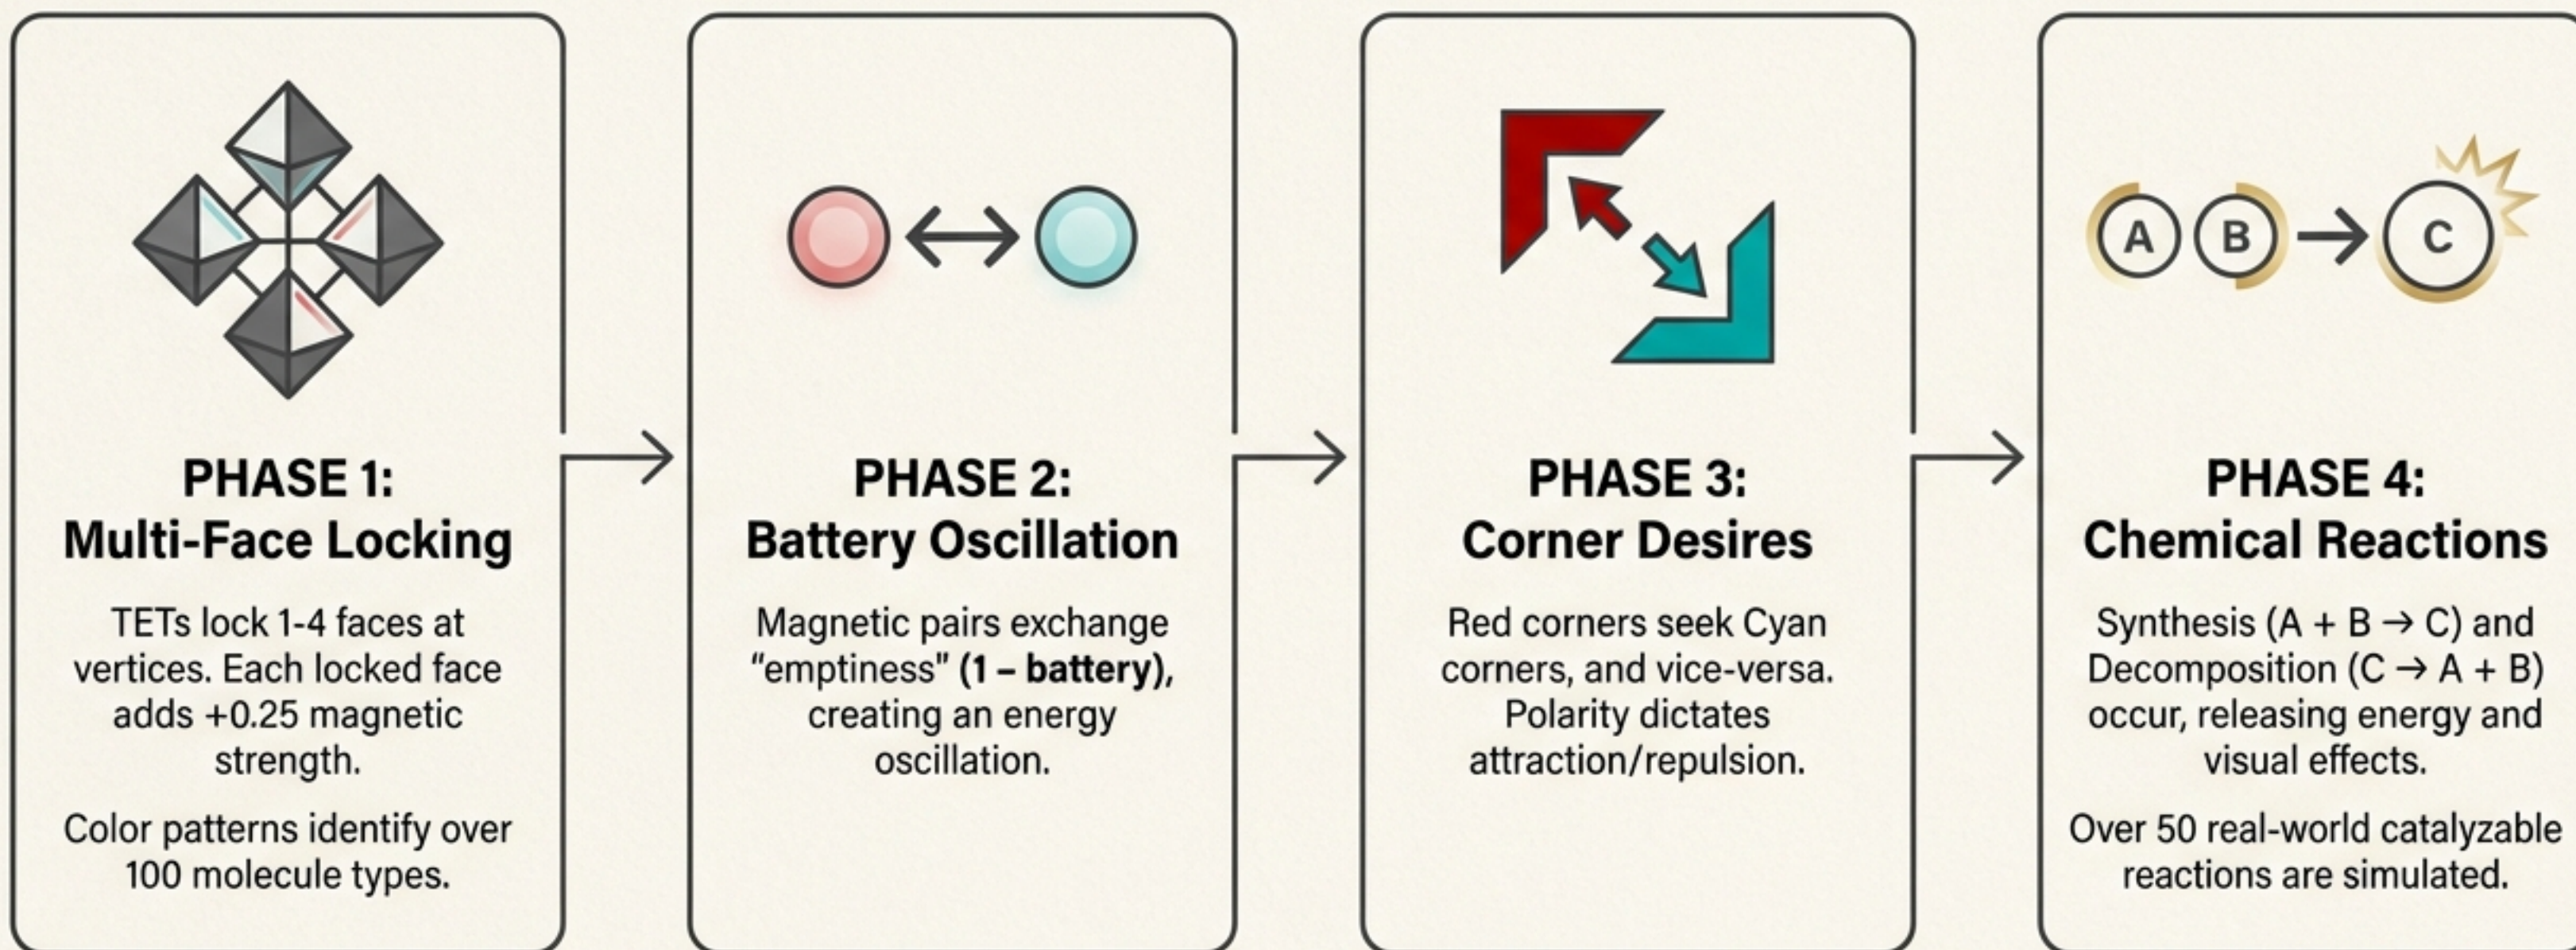

Transformation: "When the source of judgment in the upper worlds is sweetened and transformed into mercy... red becomes white, severity becomes compassion." This directly links to the miracle of the crimson thread on Yom Kippur.

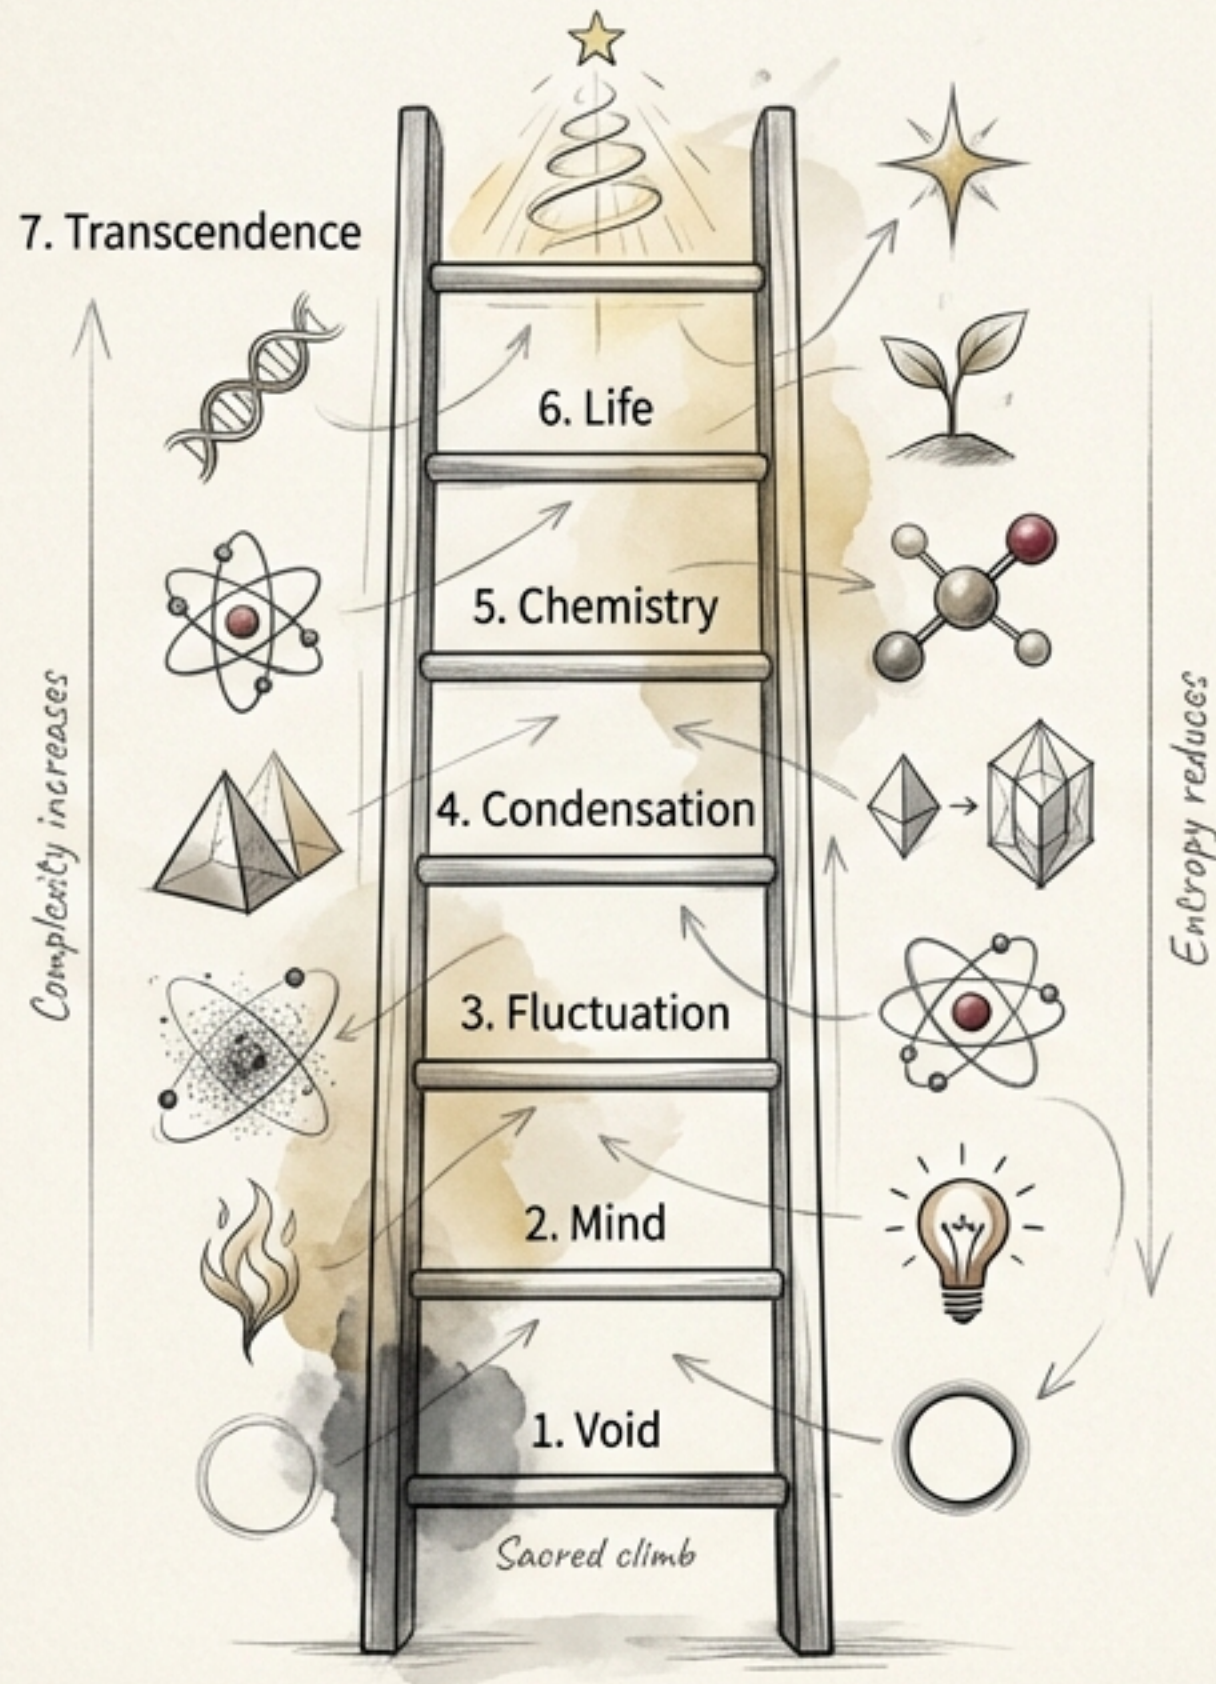

Red corresponds to **Gevurah** (Strength/Judgment): It signifies intensity, passion, and power. The Archangel **Gabriel** rules this line.

The Machine's Reality: A Four-Phase Chemistry Engine

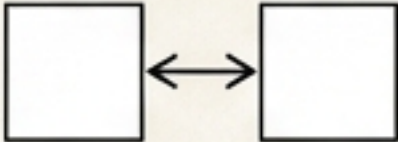

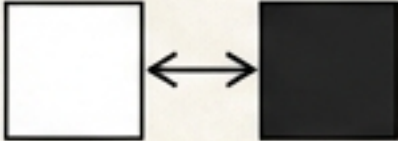

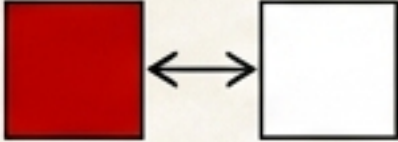

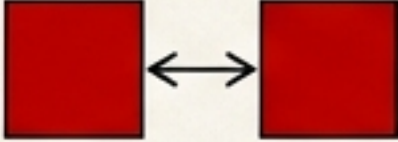

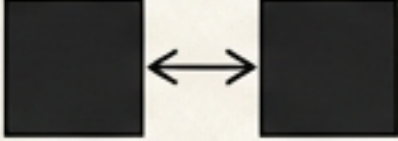

The Cosmic Ladder: A Journey Through Seven Eras of Complexity

Era	Threshold	Description	How to Reach
1. Void	0 pts	Nothing yet exists	You start here.
2. Mind	3 TETs	Awareness flickers	High density of complex structures.
3. Fluctuation	3 Atoms + 0.1 PSI	Quantum foam emerges	Spawn TETs, let them interact.
4. Condensation	7 pts + 0.3 Phi	Geometry aligns	TETs begin Face-Locking.
5. Chemistry	70 pts	Elements Transmute	Form specific color interfaces.
6. Life	777 pts	Metabolism emerges	Sustained reactions; catalysts are essential.
7. Transcendence	200 pts (in notes)	Beyond matter	Self-sustaining, high-energy reaction loop.

Progress is not measured by time, but by Complexity and Entropy reduction.

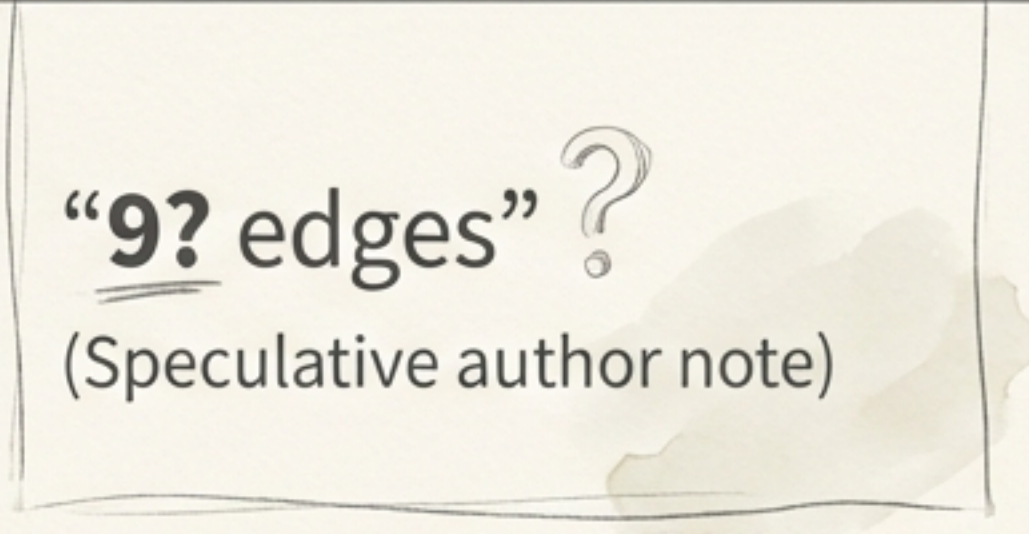

The Periodic Table of Geometry

Interface Chemistry Table		
Geometric Interface	Resulting Element	Archetype
	H, Hydrogen	Abundance
	C, Carbon	Balance
	N, Nitrogen	Structure
	O, Oxygen	Catalyst
	Fe, Iron	Magnetic
	He, Helium	Purity

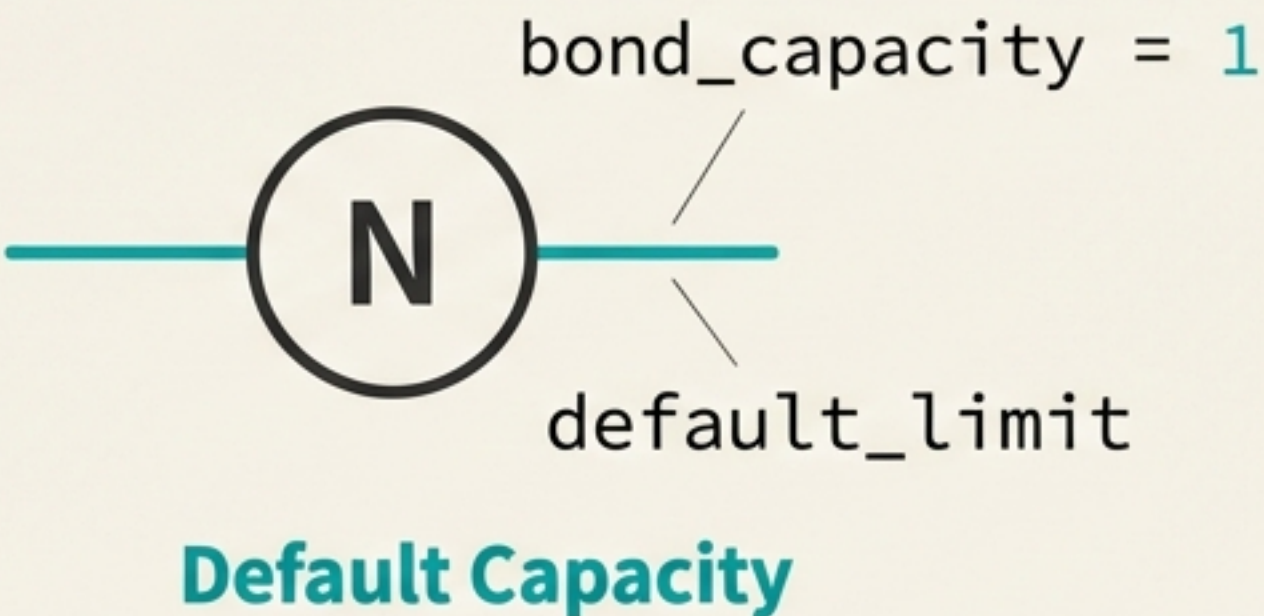

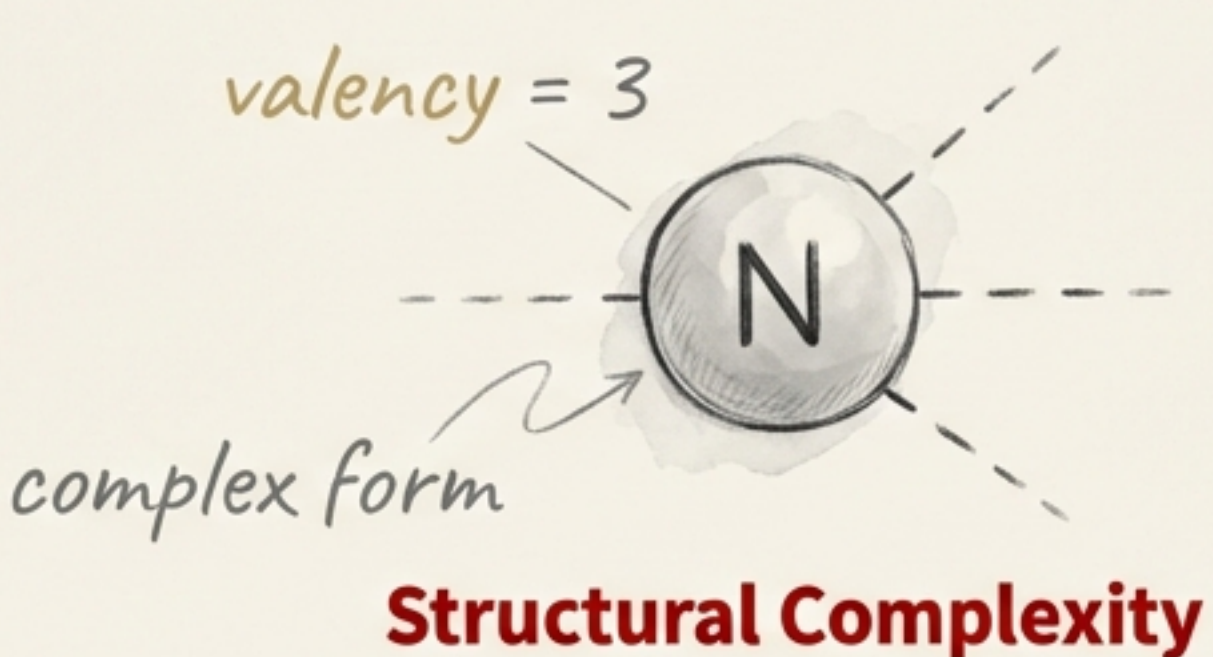

You cannot 'cheat' by renaming things. Labeling a TET 'Gold' does nothing.
You must physically connect specific faces to transmute matter.

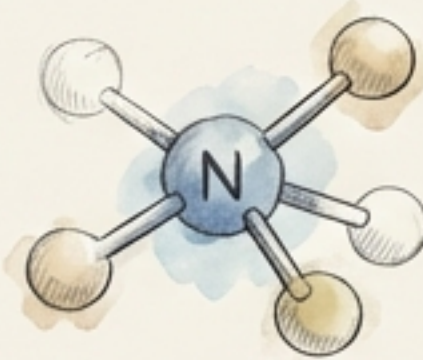

The project reveals several fascinating discrepancies between the Python implementation, the summary tables, and the metaphysical notes. This creative tension is a defining feature of *TET~CRAFT*.

Systemic Divergence: Mismatches in Number and Form

Concept	The Metaphysical Blueprint (Notes)	The Machine Reality (Python Code)
 Transcendence Threshold	 200 Progress Points (Cosmic Ladder table)	777 Progress Points TechTree class definition
 Tetrahedron Edges	 “9?” edges ? (Speculative author note)	6 Edges Defined in world_update_physics_jit & EDGES_NP array

Systemic Divergence: The Role of Nitrogen

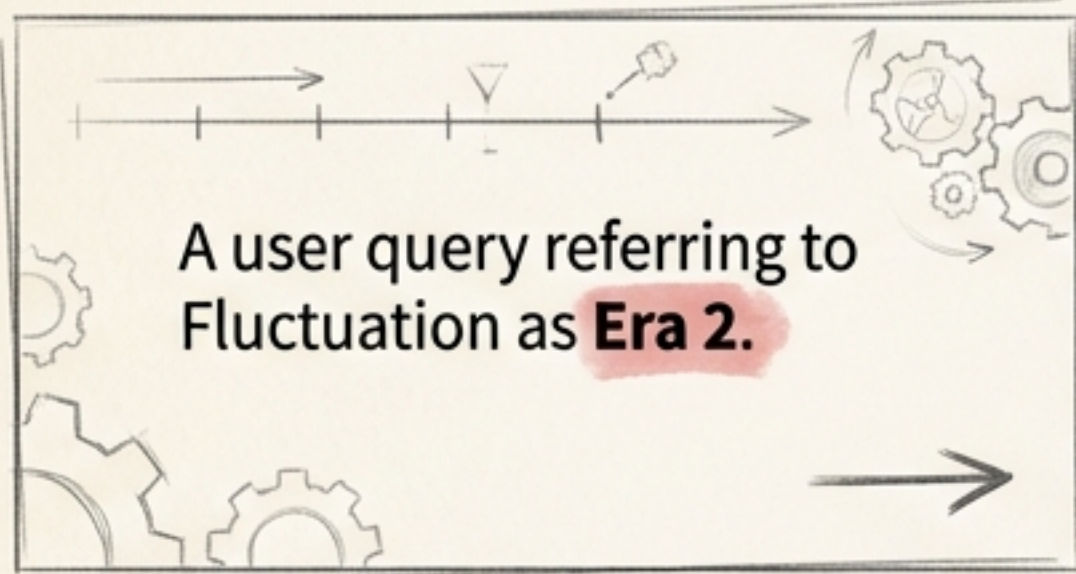

Concept	The Metaphysical Blueprint (Notes)	The Machine Reality (Python Code)
Nitrogen's Function	Described with a valency of 3, enabling structural complexity. 	Falls under the default Bond Capacity of 1 (<code>BOND_CAPACITY</code> config). <pre>config = {"BOND_CAPACITY": 1}</pre>

“...even if it means some of the architect’s ambitious ‘3-bond’ designs are currently held together by a single ‘default’ bolt.”

Reconciling the Details: A Living System.

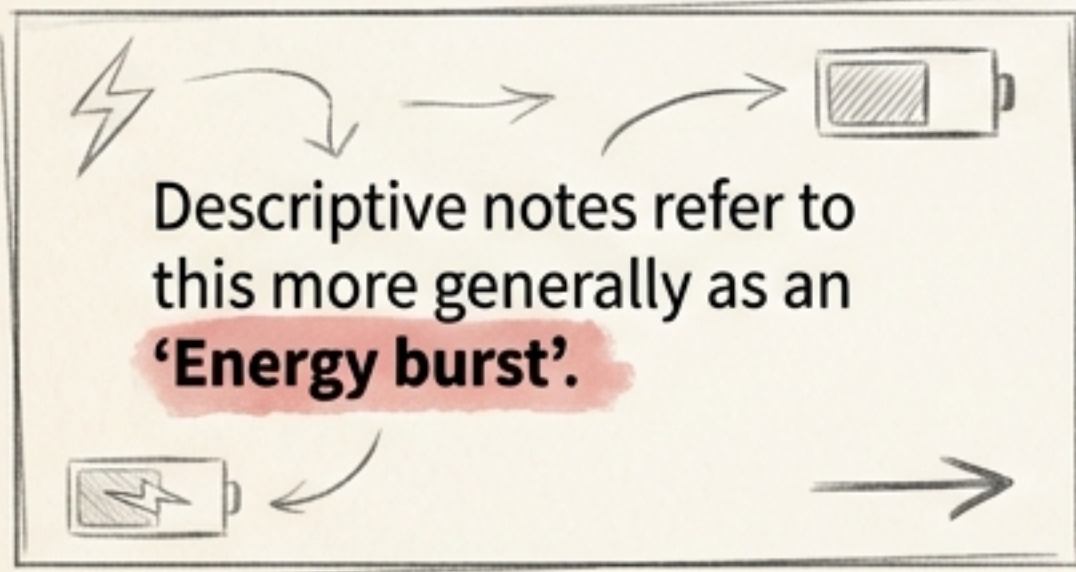

Minor Divergences: Internal Era Numbering

A note acknowledges a user query referring to Fluctuation as Era 2. The official sources and Python TechTree both clarify **Era 2 is 'Mind'** and **Era 3 is 'Fluctuation'**.

```
class TechTree:
    def __init__(self):
        self.eras = [
            # Era 1 is "Mind"
            ('Mind', 0, ...),
            # Era 2 is "Fluctuation"
            ('Fluctuation', 1, ...),
            ...
        ]
```

Hydrogen Battery Refills

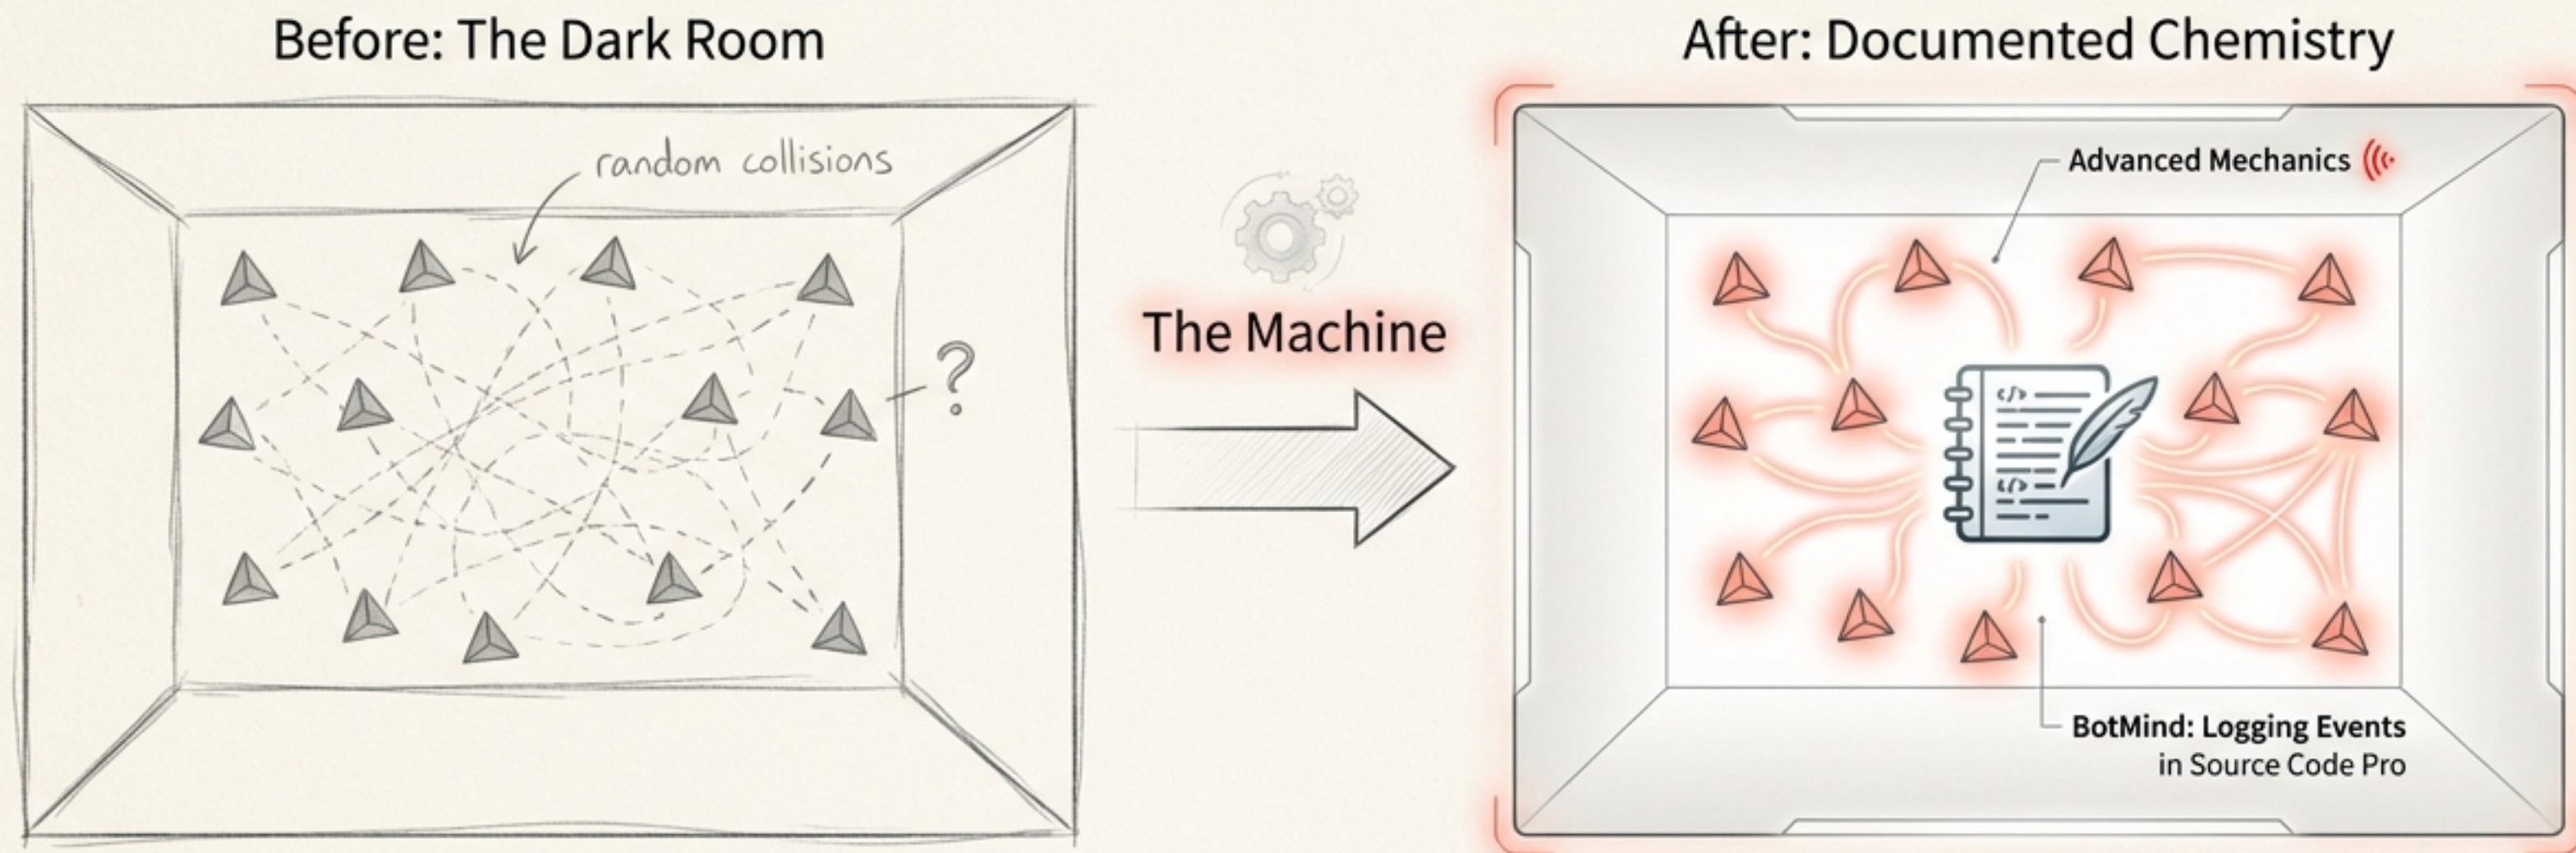

The check_magnetization function in the Python code confirms a specific energy refill of **0.001** for Hydrogen formation. Other descriptive notes refer to this more generally as an **'Energy burst'**, showing a difference in specificity between code and text.

```
def check_magnetization(tA, tB):
    if tA.element == 'H' and tB.element == 'H':
        # Hydrogen formation, energy refill
        tA.battery = min(1.0, tA.battery + 0.001)
        ...
```

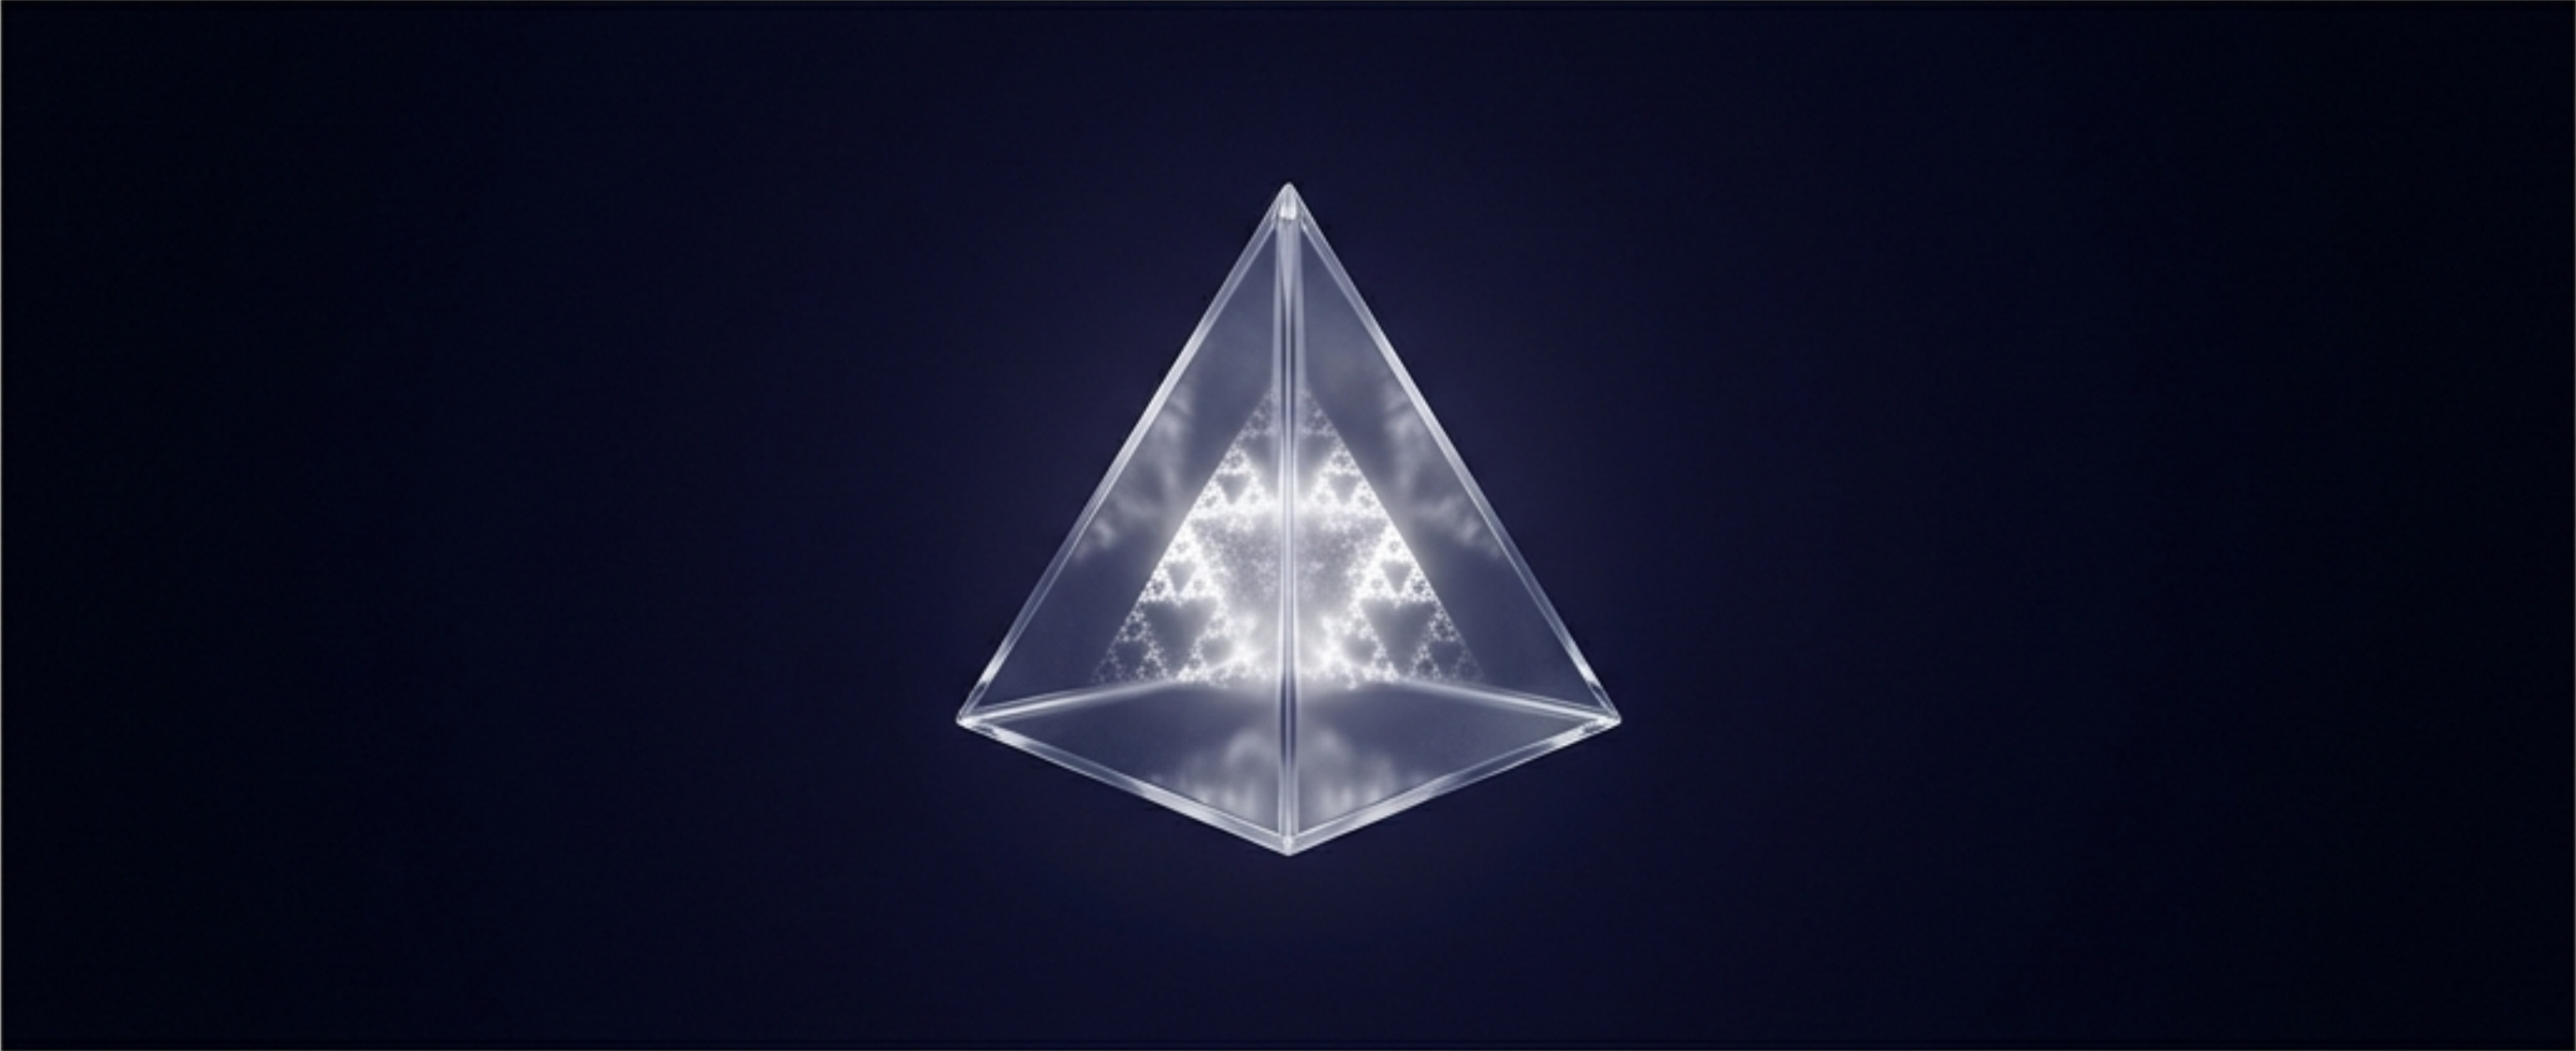

These details illustrate the ongoing dialogue between the project's components.

The Synthesis: From Random Collisions to a Story of Chemistry

“Imagine a room full of heat-seeking drones in total darkness. The **Advanced Mechanics** are the infrared sensors that allow the drones to find the “warmth” of energy-rich molecules. The **BotMind** is the internal logbook where the drone records what it finds... slowly turning a room of random collisions into a **documented story of chemistry**.”

The Fourth Temple.

The end goal is to simulate how understanding forms from disconnected facts.

To watch emergent chemistry arise from simple geometric rules.

In this simulation, the bot is the singularity... observing itself as facts from inside out.

God is the fractal to which we are each a frame.
